What Is Stik Friks?

Stik Friks is an NFT project building on the Cardano blockchain. Stik Friks has [multiple collections](#) of NFTs all of which can be identified by their unique policy IDs. (view collections & policy ID's [here](#))

The **base** collection (*sold out*) which we refer to as the “**OG Stik Friks**” is a collection comprised of 6,969 Unique Characters, all randomly generated using a total of 142 assets (hats, mouths, eyes, base colors, backgrounds... examples pictured below) Additionally, you can browse the OG Stik Friks [here](#).

The *OG Stik Friks* is a collection based around being PFPs (Profile Pictures) for many people to own so they can take part in using them as their appearance here on the internet (or wherever else)

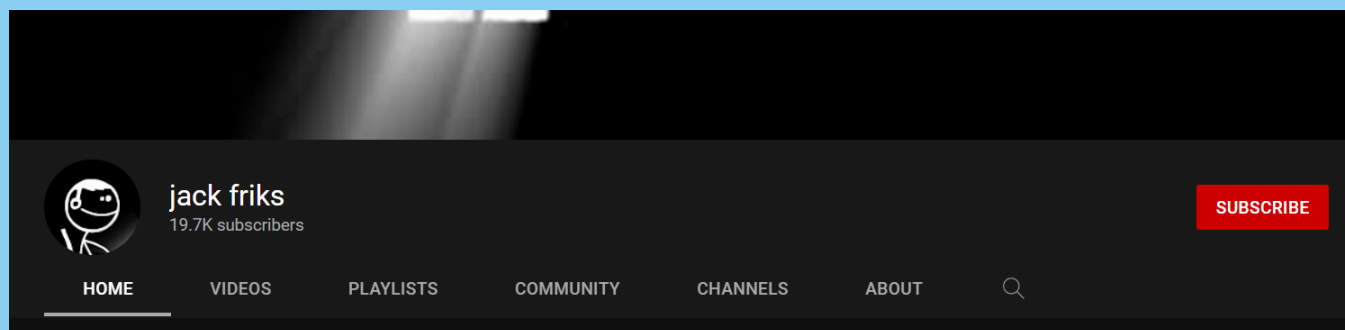

This OG collection will also serve more utility for other collections & series which we will cover in this paper.

Overall, Stik Friks is a project about building community without taking things too seriously. There is a lot of headaches & data out there in the NFT world & we want to give everyone a place to come hang out & chat in a laid-back manner while growing in the Cardano ecosystem.

Mission

Our goal here at Stik Friks first & foremost is to bring a fun & laid-back experience to everyone involved in our project while building a community of awesome people from all walks of life that take interest in Cardano & NFTs.

Something we also value a lot is education & getting people more informed about good practices & things to look out for in the wild world of cryptocurrencies. This part of our mission is being dove into already with the [jack friks](#) YouTube Channel (previously “Jack Ingram Crypto” & Yes, the “we” writing this blueprint is just me, Jack)

The jack friks YouTube Channel will continue to be a major part of the Stik Friks brand as time goes forward & these two communities will be intended to grow in sync with one another.

This blueprint is aiming to let you know our intentions more directly with the Stik Friks project so there is less confusion & chances to make guesses about what our previous [3 sentence roadmap](#) entailed.

From a subjective point of view we have already completed this roadmap, but fear not, our pursuit of the missions mentioned doesn't end here

Looking Forwards

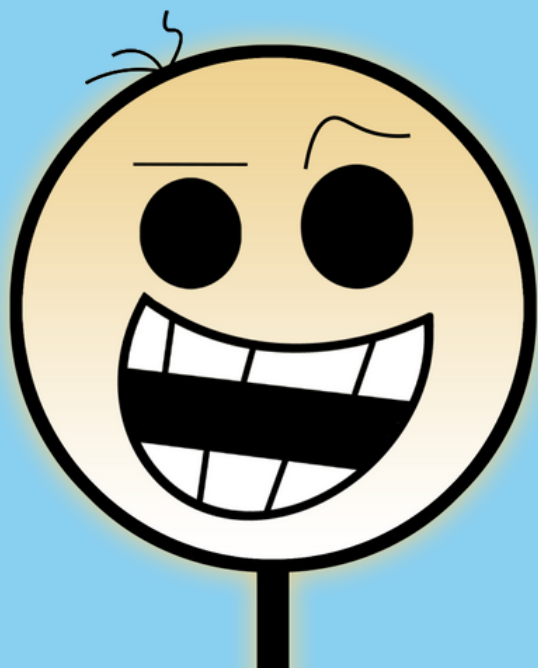

Ok, now to the part we cover the future of Stik Friks, & the main reason for this blueprint... What's next? Wen moon? (& any of the usual questions to be answered in a formal blueprint.)

Main Initiatives

While looking forwards there are 4 main initiatives we have in mind that you should be aware of.

- *Sense of community & public domain*
- *The Frik Clique*
- *Decentralized holder voting via Friks DAO*
- *Ongoing Crypto & Cardano Education*

Now, keep reading to find out more about each of these initiatives as each one is a crucial part of what is coming next for Stik Friks.

... Wen moon?

Sense of community & public domain

Originally in this blueprint, we had the idea that we needed more collections & NFTs to bring in more people to enjoy Stik Friks, however, after a lot of thinking & pondering we've decided its best to keep us stronger & more tight-knit as a community by pausing future mints & building on top of the existing OG Stik Friks so we can provide value to you as our priority, we want you to enjoy what your friks let you do & give you ownership of.

For now, our other collections which you can view [here](#) will remain as collectibles as we mentioned upon creating them.

Upon conception Stik Friks was a fun project, with a small dream to make people come together & laugh at silly NFTs on the Cardano blockchain. Although we haven't explicitly stated this before we want to make a note that we do not claim any copyright to Stik Friks & we are always open to our community making derivatives or using their Stik Friks in literally any way they wish.

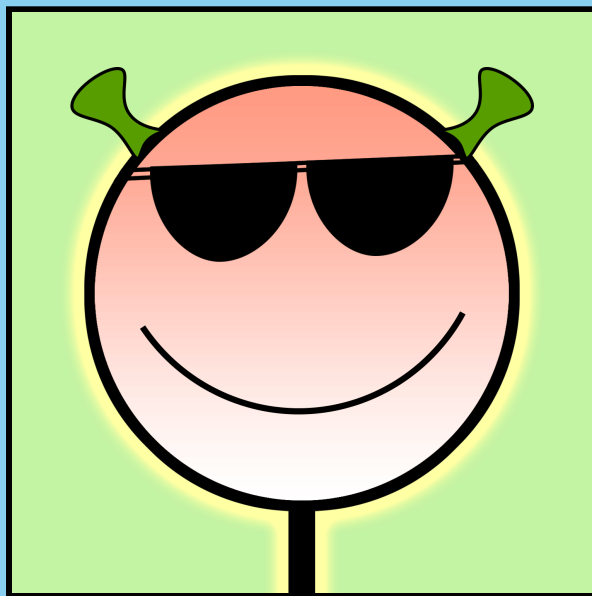

Yes, you can sell them for a profit on merchandise, yes you can make your own T.V show around your Stik Friks, yes you can turn them upside down & call them Frik Stiks, whatever you want, we aren't going to stop you & encourage creative freedom on the original Stik Friks assets.

But... why? We believe that NFTs are scarce as is, & so is the amount of creativity 1 person has, therefore by putting Stik Friks under a

public domain or cc0 rights category anyone can use their creativity without the hindrance of a company copyright's lawful impacts.

In our first blueprint revision, we mentioned a plan to bring in 30,000+ more NFTs to expand the community & allow for more people, since then we've decided instead to open the doors to people who want to build onto Stik Friks, rather than just releasing another collection.

All in all, we think this makes for a real sense of community where each person has the same rights as the next to the Stik Friks IP so creativity can blossom.

Give us your feedback in the
Stik Friks [Discord](#) 

The Frik Clique

The Frik clique is a collection of uniquely styled frik friends all hand-drawn 1/1 by Jack Friks. Below are a few examples of some pieces from the Frik Clique.

All frik clique NFTs are based on the people initially given the nfts real-life appearance or an NFT they own. There are 2 methods to get a frik clique NFT

Method 1 is for me to draw you in & offer you an NFT mint window to claim it, if you want to suggest people be added you can do so by DM'ing me with why you think said person should be a part of the frik clique.

Method 2 is to own 10 or more OG Stik Friks & then put in a request in our discord request channel. Inside this request post a reference image via an NFT you own or an IRL picture OR a brief description.

Max Supply is 999. After this, the frik clique will be aftermarket only with 6.9% royalties being requested to the creator.

Friks DAO

What the frik is a DAO? You may be asking yourself... For starters, DAO Stands for Decentralized Autonomous Organization.

There are many benefits to forming a DAO and we want to bootstrap some of these benefits utilizing our OG Stik Friks as the token controlling voting power in the organization, allowing the holders of our very first project to gain voting power in the DAO simply by owning 1 or more assets from our OG Stik Friks Collection.

If what we just said confused you, please consider reading [this article](#) for a more in-depth & better understanding of DAOs, how they operate & how they can benefit you.

Friks DAO Overview

Okay so how's this going to work? Well, let's lay out the basic structure & utility aspects from a high level.

Voting Power

First, to have voting power in the Friks DAO & to participate in voting on decisions & proposing actions for the DAO to take, you will need to own at least 1 OG Stik Frik, there are only 6,969 of these & no more will ever be created.

The more OG Stik Friks you own, the more voting power you have. 1 OG Stik Frik = 1 voting power.

For now, we have set up a custodial wallet that @jackfriks#1602 will have the signing keys for, one Hardware wallet & one hot wallet to be used for smart contract (SC) actions until SC is supported on hardware wallets. These wallets are only temporary until we have formed a completed smart contract with multisig signing to spend DAO funds or make unanimous decisions for the Stik Friks project as a DAO.

As we continue structuring the DAO we want to ensure that we can still vote on decisions & propose ideas so to start we will be utilizing Discord with a custom bot that counts your votes based on your Stik Friks verified with the CNFT Bot.

Next, what can you do with this “voting power”? Well, there are about a million things or directions a DAO can take. The voting power could decide to do just about anything. From funding development to acquiring non-fungible assets for the DAOs vault. Use your imagination & you may just think of something brilliant you can do using the help of all the brainpower within the DAO.

Funding The DAO to acquire assets

Finally, let’s wrap up this high-level overview of the Friks DAO conception... how will this DAO be funded? Since the initial sale of Stik Friks was not DAO-oriented, the source of funding will be from a 10% aftermarket royalty, 1% of which will be for the creator of stik friks, & 9% for the DAO treasury. (previously just 2% to the creator)

“Frik DAO?”
→ frik yes.

Ongoing Crypto Education

Another main initiative that is of great importance is crypto education, & although there are many people out there helping to educate all things crypto, the more people helping this initiative the better.

After all, if you believe blockchain technology & cryptocurrencies are the way forward to a better future, we best get to teaching people all about them!

What we are doing

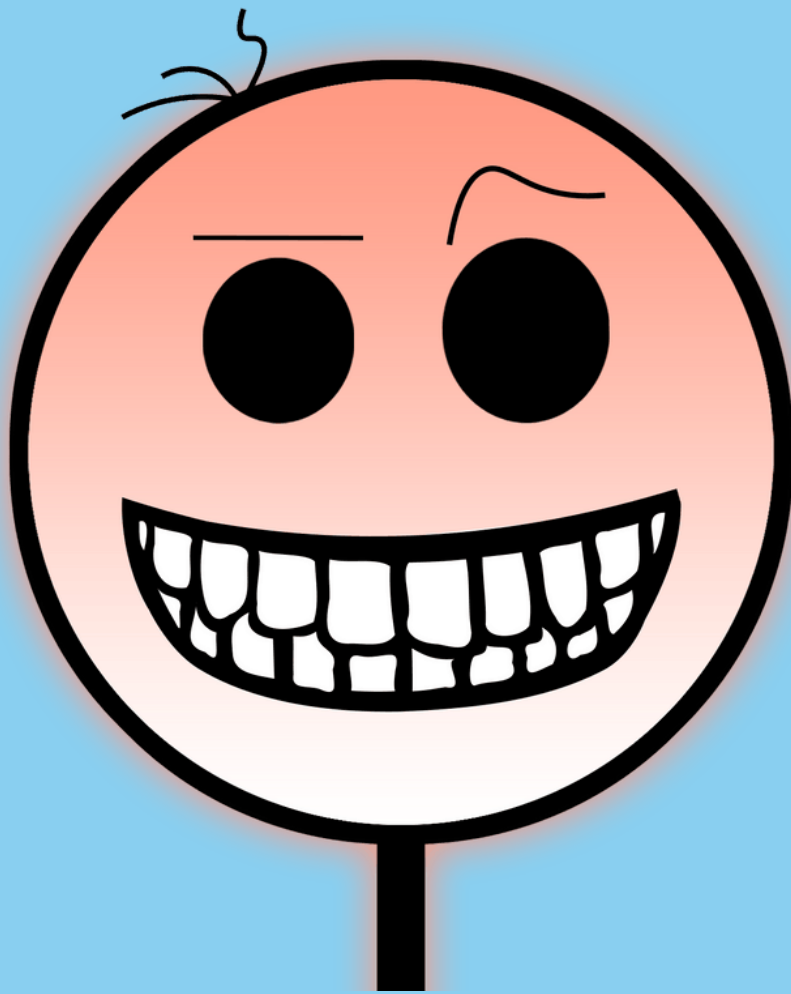

Let's go over briefly what we plan to add to this education front. As mentioned previously the [jack friks](#) YouTube Channel is the main player on this front.

Growing this channel by helping educate people every single day... lucky for us... growth on YouTube also feeds back into growing the Stik Friks community.

This is our main position in helping educate people on cryptocurrency matters & more specifically Cardano, we also heavily encourage you to always help educate & share your experiences with others in the community.

Wrapping Up

Thank you so much for reading our blueprint, & please continue to DYOR in this wild space & be careful. With Stik Friks or any NFT project, it's important to keep caution in mind as it is very hard to gauge a market's reaction to any project without hindsight. ❤️

Thanks for
reading ❤️
